WWM	welded wire mesh
yp	yellow pine

The Small Print - These house plans are not licensed to anyone other than the party listed on each sheet. They are not transferable to any builder, or subcontractor who is hired to build the house, nor their friends nor their family. If any modifications are made to these plans with a PDF editor, they must include the persons name who is changing these plans, and the date of the changes. If the type font anywhere on these drawings is different than 'this', it has been altered. PDF's are now the industry standard. I appreciate the plan reviewers who have given me feedback on this issue. I try to provide very good house plans and they are very reasonably and fairly priced. I am happy to sell them, and appreciate those who do not steal them, but rather purchase them legally. Thank you, Rick Thompson

Thank you for your purchase of these house plans.

These plans are designed to conform to the 2015 IRC and the 2018 NRC including local state amendments. National and local building codes vary with location and change from time to time. Therefore it is impossible to warrant compliance to your specific location. It is the responsibility of the purchaser and/or the builder to adapt these plans to the requirements of the individual locale.

Structural Notes

These plans are designed for roof loads of 20 psf live load and 10 psi dead load. The chart to the left can be used to adjust for different requirements. All beams are labeled 'LVL' and should be sized locally. Roof loads can vary and have a big impact on the beams carrying accumulated loads. Most Lumber suppliers can have this engineered for their product.

Wall Header Notes

Headers 3' or less to be 2-2x6 with 1 jack each side
Headers 4' - 6' to be 2-2x8 with 2 jacks on each side
Beams 4' to 6' to be 2-2x12 with 2 jacks on each side
or 3" min bearing and footing under point loads.

Wall bracing notes

Continuous 7/16" osb sheathing - typical

Wall bracing shall be in accordance to IRC/NRC Section 602.10.3. The required length of bracing for each side of a rectangle circumscribed around the plan or a portion of the plan at each story level shall be determined using Table R602.10.3 and Figure R602.10.3(1). The cumulative contributing length of braced wall panels assigned to a rectangle side shall be greater than or equal to the required length of bracing specified in Table R602.10.3. The following additional requirements shall apply.

Limitations - The continuous sheathing requirements of Section R602.10.3 shall be limited to bracing method C5-WSP in accordance with Table R602.10.1 with the following conditions of use:

1. Basic design wind speed shall not exceed 115 mph.
2. Wall height at each story level shall not exceed 12 feet.
3. Eave to ridge height shall not exceed 20 feet.
4. Exterior walls shall be sheathed on all sheathable surfaces including infill areas between braced wall panels, above and below wall openings, and on gable end walls.
5. Except when used for the bracing method GB, the interior side of exterior walls and both sides of interior walls shall be sheathed continuously with minimum 1/2-inch-thick gypsum wall board interior finish fastened in accordance with Table R102.3.5, or approved interior finish of equivalent or greater shear resistance unless required for fire separation by Section R302.6, gypsum board shall be permitted to be omitted where the required length of bracing as determined in Table R602.10.3, is multiplied by 1.40.
6. Floors shall not cantilever more than 24 inches (607 mm) beyond the foundation or bearing wall below.

Requirements - The required length of bracing for each side of a rectangle circumscribed around the plan or a portion of the plan at each story level shall be determined using Table R602.10.3 and Figure R602.10.3(1). The cumulative contributing length of braced wall panels assigned to a rectangle side shall be greater than or equal to the required length of bracing specified in Table R602.10.3. The following additional requirements shall apply.

1. Braced wall panels on exterior or interior walls shall be assigned to the nearest rectangle side as shown in Figure R602.10.3(2) for each story level floor plan.
2. Braced wall panels shall be distributed and installed in accordance with Figure R602.10.3(3).
3. A minimum of one-half the required bracing amount for each rectangle side should be located on exterior walls within 8 feet of the location of the rectangle side.
4. Interior braced wall panels using Method GB shall be assigned to the closest parallel rectangle side and shall contribute 0.5 times their actual length. The narrowest width of braced wall panels allowed for GB is 48", and the 0.5 accounts for GB being half the strength of other methods except LILB.
5. The bracing amount provided on an upper story building side shall be deemed to comply where it equals or exceeds the amount of bracing required for the story immediately below.
6. Where the bracing amount provided on an upper story equals or exceeds the amount of bracing required for the story below, an angle of bracing shall not be required for the upper story.
7. C5-WSP Continuous sheathed WSP method to have - Minimum braced material thickness or size 7/16". Minimum brace panel length or brace angle 24" adjacent to window not more than 67% of wall height; 30" adjacent to door or window greater than 67% and less than 85% of wall height; 48" for taller openings. Fasteners 6d common nail or 8d (2 1/2" long x 0.113" diameter) nails. See table R602.3(3). Space 6" edges and 12" field.

General Notes

• Square footages are for heated floor areas. This does not include fireplace projection or vaulted space. Stairs are counted on the main floor only.

• Dimensions are from the face of the stud wall. Contractor to verify all dimensions and please contact us if an error is present..

• All footings shall be on firm undisturbed soil of no less than 2000 psf and be below frost depth. The exact size and reinforcement of concrete footings must be determined by local soil conditions.

• HVAC design to be sized according to the local climate conditions including compass direction.

Energy Notes

• Caulk all exterior toe plates with latex caulk.

• Caulk all wire and pipe holes where they penetrate all upper and lower exterior plates.

• Use blown-in wall insulation if at all possible. If batt insulation is used pack behind all electrical boxes.

• Seal all joints in HVAC ducts, with leakage no more than 3%. Three inch fiber mesh tape should be used on all collar to plenum connections and all gaps that are 1/4" or wider. Insulate ducts with R-6.5 or greater.

• Foam insulate between all exterior window and door edges and rough opening frame. Use non-expanding foam.

• Provide back draft damper on kitchen hood vent, dryer vent, and bathroom vents.

• Insulate all hot water pipes.

• Install wrap kit on water heater.

Plan 1007A

W5 Wall detail FI 1
scale 1"=1'-0"

W1 Wall detail FI 1
scale 1"=1'-0"

F4 Foundation - block wall
scale 1"=1'-0"

General crawl notes

Provide 18"x24" min. access door. Location as per field conditions - side preferred.

Provide foundation vents not less than 1 sqft per 150 sqft under floor space. One vent within 3 feet of each corner. IRC - R408.1

Unvented where exposed earth is covered and and air supplied as per IRC - R409

Fill piers solid with grout. Pier block size shown is minimum. May vary as per foundation height.

Pier spacing may vary dependant on local snow loads, soil bearing capacity and the use of roof trusses.

Footing sizes and reinforcement are assumed. Soil conditions vary and must be taken into account. Inspectors can allow builders to adjust the use of rebar and footing sizes as per local conditions.

Girders may be sized with LVL's to reduce piers. Up size footing accordingly (30"x30"x10" min w/ 4-#4's each way) and 16"x16" filled piers. See separate drawing for LVL's

Separate double joist under plumbing walls 3 1/2"

Minimum Insulation Chart

Table N 1102.1 - IRC 2015 & (2018 NRC - in parentheses)
Insulation and fenestration requirements by components^a

Climate Zone	Glazing U-factor	Glazing SHGC ^e	Ceilings R-value	Wood frame wall R-value	Floors R-value	Basement ^f walls R-value	Slab ^g perimeter R-value and depth	Crawl space ^h wall R-value
1	NR	.25	30	13	13	0	0	0
2	.40	.25	38	13	13	0	0	0
3	.35	.25	38 (or 30 ⁱ)	13	14	5/13 ^f	0	5/13
4	.35	.40	49 (38 or 30 ⁱ)	20 or (15 or 13.5 ^h)	14	10/13 (10.2) (10/13)	10.2 (10/13)	10/13
5	.32	NR	49 (38 or 30 ⁱ)	20 or (15 or 13.5 ^h)	30 ^g	15/14 (10.2) (10/13)	10.2 (10/13)	15/14 (10/13)
6	.32	NR	49	20 or (15 or 13.5 ^h)	30 ^g	15/14 (10.2) (10/13)	10.2 (10/13)	15/14 (10/13)
7	.32	NR	49	20 or (15 or 13.5 ^h)	38 ^g	15/14 (10.2) (10/13)	10.4 (15/14)	15/14 (10/13)
8	.32	NR	49	20 or (15 or 13.5 ^h)	38 ^g	15/14 (10.2) (10/13)	10.4 (15/14)	15/14 (10/13)

- a - R-values are minimums, U-factors and SHGC are maximums. When insulation is installed in a cavity which is less than the label or design thickness of the insulation, the installed R-value of the insulation shall not be less than the R-value specified in the table.
- b - The fenestration U-factor column excludes skylights. The SHGC column applies to all glazed fenestration.
- c - "15/14" means R-15 continuous insulated sheathing on the interior or exterior of the home or R-14 cavity insulation at the interior of the basement wall. "15/14" shall be permitted to be met with R-13 cavity insulation on the interior of the basement wall plus R-5 continuous insulated sheathing on the interior or exterior of the home. "10/13" means R-10 continuous insulated sheathing on the interior or exterior of the home or R-13 cavity insulation at the interior of the basement wall.
- d - R-5 shall be added to the required slab edge R-values for heated slabs. Insulation depth shall be the depth of the footing or 2 feet, whichever is less in Zones 1 through 3 for heated slabs. For monolithic slabs, insulation shall be applied from the inspection gap downward to the bottom of the footing or a maximum of 24 inches below grade whichever is less. For floating slabs, insulation shall extend to the bottom of the foundation wall or 24 inches, whichever is less.
- e - There are no solar heat gain coefficient (SHGC) requirements in the Marine Zone.
- f - Basement wall insulation is not required in warm-humid locations as defined by Figure 301.1 and Table 301.1.
- g - Or insulation sufficient to fill the framing cavity. R-14
- h - "13.5" means R-13 cavity insulation plus R-5 insulated sheathing. If structural sheathing covers 25% or less of the exterior, insulating sheathing is not required unless structural sheathing is used. If structural sheathing covers more than 25 percent of exterior, structural sheathing shall be supplemented with insulated sheathing of at least R-2.
- i - The second R-value applies when more than half the insulation is on the interior of the mass wall.
